YELLOW FREESTONE PEACH

"WONDERFUL."

I have now under propagation a *New Seedling Peach*, which I have named "WONDERFUL," very similar in size, appearance and taste to the *Globe*, but ripening the second week in October.

I take great pride in presenting this *New Late Yellow Peach* to the attention of fruit growers and all who are interested in fruit culture. Lovers of fine fruit will be rejoiced to find its unsurpassed flavor and high qualities, combined with such perfection of form, large size and beauty of coloring, while its lateness in ripening, firmness of flesh and good keeping qualities commend it especially for profitable planting as well as to the amateur.

The trees make a remarkably strong, vigorous growth, being covered with heavy foliage, fully ripening their wood and consequently do not winter-kill.

The colored plate of the "Wonderful" sent out by me last spring, was not satisfactory, but it was the best I could do at the time, to put in my Spring Catalogue, and is not a true representation of the Peach.

No satisfactory engraving has, as yet, been made of the Peach by any one excepting that of the sectional view presented on page 2, which was engraved by the *Rural New Yorker* from a sample, which (by the request of a prominent horticulturist) I sent to the editor. This is indeed a true engraving of the "Wonderful" but it was not made from one of the largest specimens, as I sent the sample more for the color than the size.

No drawing in colors having been made from the fruit, I do not see how it is possible for any one to make a true colored plate of it, therefore I will not attempt it again until my young trees bear fruit (the original and only bearing tree having been destroyed by agreement of the present owners on the first day of September, '87, after we had cut all the buds off of it for propagation, and before any of the fruit was ripe).

Thinking that my customers might be misled by conflicting statements in other catalogues (with regard to the "Wonderful" peach), I respectfully call attention to the following facts:

I (originally) NAMED the Peach "WONDERFUL."

I introduced it at the Mount Holly Fair.

I exhibited one bushel of the Peaches there.

I was awarded a SILVER MEDAL and FIRST PRIZE in money.

I OWN one-third of the ORIGINAL STOCK, the Original Tree having been destroyed.

One of the leading nurserymen of this State seeing the great attention towards, and admiration of, this Peach from the many thousands of visitors at the Fair, and

being so much impressed with the remarkable merits of it himself, went to the originator and purchased the original tree at a fabulous price, and shortly afterward (*at his request*) he and I formed a stock company of it and the trees that I had budded from the original tree, taking in another prominent nurseryman to assist in disseminating it.

Having lost all the buds which I set on the 8th of October, 1886, by freezing out on the night of 16th of October (which I afterward learned) before they had united with the trees, we had to take a fresh start, and no trees will be ready to send out until the Fall of 1888, when they will be sold at the following prices, viz:

	Each.	Per doz.	Per 100.
First class trees,	\$1 00	\$10 00	\$60 00
Second class and June budded trees,	0 75	7 50	50 00

A very liberal discount will be allowed to the trade.

I set quite a number of buds of the "Wonderful," taken from the *original tree* (in healthy seedlings grown from natural peach pits from North Carolina) which buds look well.

I will now book orders to be furnished in rotation as long as stock of trees lasts, for fall of '88 or spring of '89.

I have already booked orders from most of the nurserymen and several others who saw and tasted of the peaches which I exhibited at the Fair. *May I not be favored with your order?*

CHAS. B. HORNOR,

MOUNT HOLLY, N. J.

DESCRIPTION OF THE "WONDERFUL" PEACH.

Color, rich yellow, with a beautiful bright crimson blush, shaded and splashed and graduated into the yellow by minute crimson dots; very dark in the sun; scant bloom, of a light silvery gray; suture not distinct; shape almost round and very regular; quality excellent, I might say delicious and tempting. Ripening second week in October. Freestone.—WM. C. SCRANTON, Engraver.

Sectional View of "Wonderful" Drawn from Nature.

From the "Rural New Yorker," Jan. 8, 1887.

THE WONDERFUL PEACH.

At the Mt. Holly Fair, Oct. 16th, 1886, Mr. Chas. B. Hornor, of that place, exhibited liberal quantities of a large, handsome and delicious peach under the above name. Aside from its size, appearance and good quality, I was surprised at its keeping so well. The specimens were sampled quite freely every day, and the remainder on Saturday, the last day of the Fair, were still in good condition. The "Wonderful" is a rosy-cheeked, yellow-skinned and yellow-fleshed free-stone peach of large size and excellent quality. It is a chance seedling grown in the garden of Mrs. Margaret Fitzpatrick, of Burlington, N. J., and this season bore as its second crop one bushel of fruit. A sectional view is shown herewith. If, on further trials elsewhere it should maintain the good qualities thus far shown, it will be a very remarkable accession to our list of very late peaches. I believe Mr. Hornor is arranging to introduce it to the public in due time.

E. WILLIAMS,
(Secretary of the New Jersey State Horticultural Society.)

MANALAPAN, Monmouth Co., N. J.
March 23, 1887.

CHAS. B. HORNOR:

Dear Sir:—The "Wonderful" Peach that you exhibited at the Burlington County Fair, October 11th to 16th, 1886, and which attracted my attention, was large sized, fine flavored and very showy in appearance. If this peach proves as late and as good in orchard, I have no hesitation in saying it will prove the most valuable variety for market purposes we have in cultivation.

Very Respectfully Yours,
DAVID BAIRD.

BURLINGTON, N. J.

MR. CHAS. B. HORNOR, Mount Holly, N. J.
Dear Sir: I did not think when I wrote to you in October last, to come to Burlington and I would show you a tree with the largest peaches on that I ever saw, that you would be the means of introducing it to the public, but I am glad to learn that you are getting up a stock of the trees and that you are preparing to introduce it. I measured several specimens of the peaches before you picked them from the tree and they measured from 10¼ to 10½ inches. Its large size, fine appearance, excellent flavor and lateness of ripening, (the second week of October), will make it a great acquisition to our list of very late peaches.

Yours Respectfully,
EDMUND RUE.

MOUNT HOLLY, N. J.

The new peach "Wonderful" exhibited at the late Fair of the Burlington County Agricultural Society by Charles B. Hornor, of Mt. Holly, attracted much attention. For size, beauty and flavor it is indeed a *Wonderful* peach.

Editor News.
J. H. CLOTHIER.

From R. H. Hansell, of Rancocas and Hansell Raspberry fame.

RANCOCAS, N. J.

While at the Mount Holly Fair last October I was shown a new variety of peach exhibited by Chas. B. Hornor, called "Wonderful." For its lateness of ripening, size and flavor it has no superior.

R. H. HANSELL.

MARLBORO, N. Y., March 23, 1888.

MR. CHAS. B. HORNOR:

Dear Sir:—What are you doing with the new peach "Wonderful"? We mean the large specimens you exhibited at the Mount Holly Fair so late in the season; we think you informed us that you picked them from the tree the morning you brought them up to the

grounds. They were larger than Crawford's Late and excellent in quality; we would like to plant it.

Very Truly Yours,
A. J. CAYWOOD & SON.

From the Catalogue of one of the Leading Nurserymen of the State.

WONDERFUL.

This extraordinary Peach which created such a furor at the Mount Holly Fair, of this State, has now been bought of the originator, and is owned by myself and two others. In beauty, productiveness and other desirable qualities, it transcends all others to such a degree that the word "Wonderful" unconsciously escapes so many upon seeing it, that it became known at once as that "Wonderful Peach." Hence that name has been accepted for it, contrary (?) to the wishes of its owners, by the force of circumstances. It is a freestone, of the richest golden yellow, largely overspread with vivid carmine, and ripens after nearly all other peaches have disappeared, being the only large handsome peach ripening at that late season. Its keeping qualities are as remarkable as it is beautiful. No trees are yet for sale, but will be offered the coming autumn.

[* This is a mistake. Before I exhibited the peach in public I gave it the name it now bears. After the formation of the stock company for its dissemination an attempt was made to change its name, but the fact that I had already received a silver medal for it under that name was the reason why it was retained.—CHAS. B. HORNOR.]

BURLINGTON, N. J.

MR. CHARLES B. HORNOR:

Dear Sir:—I saw the peach "Wonderful" which you exhibited at the Fair last Fall; also saw them on the 8th day of October on the tree before they were picked. They were the largest and finest peaches I ever saw grow. I ate two of them and think they were as fine flavored as any peach I ever ate.

Respectfully,
JOHN B. DAVIS.

BURLINGTON, N. J., March 22, 1887.

MR. CHAS. B. HORNOR:

Dear Sir:—I saw the seedling peach which you named "Wonderful," while growing on the tree. It is certainly a great acquisition. Taking into consideration its bearing quality, delicious flavor and lateness, it is certainly a *Wonderful* peach.

Yours Respectfully,
L. R. HANCOCK.

FRUIT DEPARTMENT.

The following prices for Apples are for the purchasers' selection of varieties, but if I run short of some kinds (unless requested not to do so), I reserve the privilege of substituting other kinds equally as good and seasonable.

APPLES.—Standard, 1st-class, 2 and 3 yrs., 5½ to 7 ft.,

Each. \$ 10 \$ 100 \$ 1000
\$ 0 15 \$ 1 25 \$ 10 00 \$ 90 00
